***Terminal Disclaimer***

The terminal disclaimer filed on January 22, 2009 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Application 10/977,292 has been reviewed and is accepted. The terminal disclaimer has been recorded.

***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by Mr. Khoi Ta during a telephone interview on June 3, 2009.

The application has been amended as follows:

In the specification:

Page 1, replace the paragraph under "RELATED APPLICATIONS" with the following:

-- The present invention is related to the following co-pending U.S. applications:

***Reasons For Allowance***

Art Unit: 2863

The **combination** as claimed wherein a method for reducing interferences in an electrochemical sensor comprising calculating a corrected current value representative of a glucose concentration using a measured first current, a measured second current, and a ratio of a covered area to an uncovered area of a second working electrode (claims 1, 3, 7, 9) is not disclosed, suggested, or made obvious by the prior art of record.

Davies et al. (US 2005/0133368) discloses a electromechanical sensor for reducing the effects of interfering compounds in bodily fluids (Abstract, lines 1-4) comprising a second electrode including a covered portion and an uncovered portion, the covered portion is covered by a reagent layer (claim 1, lines 9-12). However, Davies does not disclose calculating a corrected current value representative of a glucose concentration based on a ratio of the covered area to the uncovered area of the second working electrode.

Davies et al. (US 2005/0183965) claims a method comprising calculating a corrected current value representing an analyte concentration using an equation which is a function of a first current, second current, first proportional relationship between an interfering overpotential current and analyte current, and second proportional relationship between said interfering overpotential current and a compound interfering current (claim 1). However, Davies et al. does not claim calculating the corrected

current value based on a ratio of a covered area to an uncovered area of a second working electrode.
